

Brainstorm & Idea Prioritization Template

Date: 03/10/2026	Team ID: 6ab8f707c23107aaaa73276f
Project Name: Auto Ticket Classification using Flow Designer	Maximum Marks: 4 Marks

Step-1: Team Gathering, Collaboration & Select the Problem Statement

PROBLEM STATEMENT (How Might We):

"How might we automatically classify incoming IT incident tickets and trigger caller updates without writing complex code, so that support staff eliminate 15 hours of manual triage each week and resolve classroom technical failures faster?"

Step-2: Brainstorm, Idea Listing and Grouping

Ideas generated by team members (Amar, Yuktesh & Team) clustered into 4 functional solution clusters:

Cluster 1: Low-Code Flow Designer Logic [Amar] Trigger flow on Record Created where Category IS EMPTY. [Yuktesh] Parse Short Description for keywords (Wi-Fi, Projector, Password, Slow PC). [Member 3] Enforce dynamic dependent subcategory values on update. [Member 4] Avoid custom Business Rule scripts to ensure maintainability.	Cluster 2: Caller Communication & Feedback [Yuktesh] Dispatch automated email immediately to Caller sys_user reference. [Amar] Include auto-assigned Category and Subcategory in receipt email. [Member 3] Add resolution time expectation in confirmation message. [Member 4] Send follow-up survey email once incident is marked resolved.
Cluster 3: Assignment & Routing Rules [Member 3] Route unclassified tickets to Tier 1 Triage fallback group. [Amar] Auto-assign Network tickets directly to Campus Network Team.	Cluster 4: Advanced AI & Smart Enhancements [Amar] ServiceNow Predictive Intelligence ML model for text categorization. [Yuktesh] Virtual Agent chatbot on school portal for self-service triage.

[Yuktesh] Escalate classroom projector incidents during active teaching hours.

[Member 4] Link tickets to SLA workflows for automated breach warnings.

[Member 3] OCR screenshot reader to extract error codes from attached photos.

[Member 4] Voice-to-ticket transcription for hotline voice calls.

Step-3: Idea Prioritization (Importance vs. Feasibility Matrix)

Mapping brainstormed ideas against Feasibility (Cost, Time, Complexity, Low-Code overhead) and Importance (Positive impact on triage time, SLA adherence, and accuracy).

	LOW FEASIBILITY (High Effort/Complexity)	HIGH FEASIBILITY (Low-Code / Fast Implementation)
HIGH IMPORTANCE (High Triage & SLA Impact)	STRATEGIC / FUTURE ROADMAP (Valuable but Complex) - ServiceNow Predictive Intelligence ML Model - AI Virtual Agent chatbot on portal - Automatic SLA timers & breach alerts	★QUICK WINS: IMPLEMENT FIRST (Our Current Project Solution) - Flow Designer keyword evaluation (Wi-Fi, Projector, Password, Slow PC) - Automated Category & dependent Subcategory update (~180 ms) - Instant automated Caller confirmation email - Fallback rule to Tier 1 Triage queue
LOW IMPORTANCE (Minor Impact on Triage)	DE-PRIORITIZED / EXCLUDED - Voice call phone transcription - OCR error screen image scanning - Hardcoded custom JavaScript Business Rules	NICE TO HAVE / SECONDARY - Post-resolution satisfaction survey email - Color-coded priority badges on dashboard

Idea Evaluation & Prioritization Scoring Table

Idea Description	Category	Feasibility	Importance	Priority Score	Decision / Outcome
No-Code Flow Designer Keyword Logic	Flow Designer	High (No scripts)	High (15 hrs saved)	10 / 10	SELECTED (Core MVP)
Automated Caller Notification Email	Communication	High (Native Action)	High (Instant feedback)	9.5 / 10	SELECTED (Core MVP)
Dependent Subcategory Auto-Mapping	Data Quality	High (Choice Field)	High (Consistent stats)	9.0 / 10	SELECTED (Core MVP)
SLA Timers & Direct Group Routing	Assignment	Medium (Config needed)	High (Prevents breach)	7.5 / 10	Future Roadmap
ServiceNow Predictive Intelligence (ML)	Smart / AI	Low (Model training)	High (Broad scale)	6.5 / 10	Future Roadmap

Final Decision: The team selected Flow Designer Keyword Classification and Automated Email Notification as the primary MVP solution. This delivers maximum triage time savings (15 hours weekly) and sub-second execution (~180 ms) with zero custom code overhead, while reserving Predictive Intelligence and automated SLA tracking for Phase 2.
