Define the Problem Statements

Customer Problem Statement Template

Date: 03/10/2026	Team ID: 6ab8f707c23107aaaa73276f
Project Name: Auto Ticket Classification using Flow Designer	Maximum Marks: 2 Marks

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your users face. Below are the defined problem statements capturing both the IT support technician's and the school end-user's points of view based on our ServiceNow Flow Designer project.

I am	I'm trying to	But	Because	Which makes me feel
A school IT helpdesk technician	Quickly resolve classroom IT issues	I spend hours manually sorting tickets	Incoming tickets lack auto-classification	Overwhelmed & Frustrated

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 (IT Helpdesk)	A school IT support technician managing high ticket volumes daily	Promptly triage, assign, and resolve campus hardware and network issues	I spend over 15 hours every week manually opening and tagging routine tickets	Callers submit tickets without choosing categories, leaving the fields blank or ambiguous, and our system lacks automated keyword classification	Overwhelmed, unproductive, and anxious about SLA breaches during morning class start rushes
PS-2 (End-User / Teacher)	A school teacher reporting an urgent classroom AV or Wi-Fi breakdown	Get quick technical assistance so class lessons and student activities are not stalled	My incident sits in an unassigned queue with no acknowledgment or progress update	Tickets must wait for support staff to manually read and sort them before being routed or confirmed	Helpless, ignored, and stressed while trying to conduct class without working technology

How our solution addresses both statements: ServiceNow Flow Designer automatically evaluates keywords in the Short Description string upon creation, dynamically populates Category and Subcategory in ~180 ms, and immediately triggers an automated confirmation email to the caller.
