

Data Flow Diagram & User Stories

Date: 03/10/20206	Team ID: 6ab8f707c23107aaaa73276f
Project Name: Auto Ticket Classification using Flow Designer	Maximum Marks: 4 Marks

1. Data Flow Description (Level 0 & Level 1 Workflow)

Data Flow Sequence:

1. Caller (Teacher/Staff) initiates ticket via portal/email →Generates incident payload (Caller, Short Description).
2. Data Store D1 (Incident Table) receives record →Flow Engine intercepts creation event where Category IS EMPTY.
3. Process P1 (Keyword Parsing Engine) reads Short Description text string →Evaluates conditional keyword logic.
4. Process P2 (Classification Engine) matches rule →Writes Category and Subcategory back to Data Store D1.
5. Process P3 (Notification Engine) retrieves Caller profile from Data Store D2 (sys_user table) →Dispatches dynamic confirmation email.
6. IT Support Agent accesses Data Store D1 →Views pre-classified, prioritized tickets on Helpdesk Dashboard.

2. Agile User Stories & Acceptance Criteria

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
School Staff / Caller	Ticket Creation	USN-1	As a school staff member, I want to submit an IT incident through the portal or email without having to guess technical categories.	Ticket record is successfully created in the Incident table with Short Description and Caller populated.	High	Sprint-1
School Staff / Caller	Notification	USN-2	As a caller, I want to receive an immediate email confirmation showing that my ticket was categorized so I know help is underway.	Automated receipt email arrives within seconds displaying incident number, Category, and Subcategory.	High	Sprint-1
IT Support Technician	Auto Classification	USN-3	As an IT support technician, I want routine tickets (Wi-Fi, projector, password, slow PC) to be automatically classified upon creation.	Category and Subcategory choice fields are automatically populated in under 1 second without human intervention.	High	Sprint-1
IT Support Technician	Triage Efficiency	USN-4	As an IT technician, I want unclassified or ambiguous tickets to be automatically routed to a Tier 1 Triage fallback queue.	Tickets without matching keywords have Category set to 'Other' and are placed in the manual review queue.	Medium	Sprint-1
IT Helpdesk Lead	Data Consistency	USN-5	As an IT helpdesk manager, I want standardized categories assigned across all shifts so monthly incident analytics are reliable.	94%+ classification consistency across all incoming incidents matching configured rules.	High	Sprint-2
System Administrator	Platform Governance	USN-6	As a ServiceNow	Admins can modify	Medium	Sprint-2

			administrator, I want the classification logic implemented using Flow Designer so our team can easily add new keywords without writing scripts.	keyword conditions directly within the Flow Designer UI; flow changes are captured in update sets.
